HUNDRED SQUARE

A hundred square has been printed on both sides of a piece of paper.

One square is directly behind the other.

What is on the back of 100? 58? 23? 19?

Can you see a pattern?

HELP

This task might seem easier if you have a real copy of a hundred square to use and annotate.

You could use a mirror on the hundred square and note all the patterns that you find. What happens if you add each number on the front to the number behind it?

NEXT

Using a different square such as a [64] 8 by 8 square will produce a different, if related, set of numbers. Describe these patterns.

Investigate similar patterns on a 1-400 square and what numbers are behind others when the square is printed back to back on a single sheet of paper.
