

EXPONENTS CARD MATCHING & PELMATHISM

<https://aiminghigh.aimssec.ac.za/exponents/>

AIMSSEC FASMED RESEARCH Formative Assessment Activity

Work out the values of the expressions on the cards and match the cards

for example:

$$6^8 \div 6^4 = 6^4 = (3^2 \times 2^2)^2$$

Play a Pelmathism Game with the cards. Place the cards face down on the table.

Players take turns to turn over 2 cards. If they match the player wins the 2 cards and has another turn. If not, the cards are turned over and the next player has a turn.

The game ends when all the cards are taken. The player who has the most cards wins.
