# TARGET DIVISION

TARGET
4 BY 2 DIVISION

÷

Be nearest to 100 to win.

Place each random digit drawn in one of the boxes.
Thinking about probabilities and understanding the
division algorithm will help you to win.

VARIATIONS

Divide 4-digit numbers by 1-digit numbers with a target of 1000.

Instead of placing each digit as it is called, players compete to be first to get the best solution given all the random digits.
