

FRACTION WALL GAME LUCKY 1/10

<https://aiminghigh.aimssec.ac.za/fraction-wall-game/>

Play with 2 players or 2 teams or alternatively with up to 7 players around a table and everyone throwing the dice in turn. Compare the fractions on the wall. Players spin the spinner twice, make a fraction with the numbers that come up and put the smaller number on top so a 2 and a 3 make $\frac{2}{3}$. The biggest fraction wins the round and scores a point.

Spin the spinner twice. If one of the numbers is 0 then your fraction could be 0, but you get another spin that give lucky tenths if you get the same number.

For example, spins of 0, 7 and 7 give $\frac{7}{10}$.
