

# MYSTIC ROSE GAME

<https://aiminghigh.aimssec.ac.za/mystic-rose/>

Players take turns to colour a line joining two of the points A, B, C, D, E and F avoiding the creation of a triangle in their colour. A player loses when completing one of the forbidden triangles either by mistake or if there is no other move possible. Only triangles with vertices at three of the points A, B, C, D, E and F are included, intersection points are not relevant.
