

MYSTIC ROSE GAME

<https://aiminghigh.aimssec.ac.za/mystic-rose-game/>

Take turns to colour a line joining 2 of the points A, B, ...F avoiding the creation of a triangle with edges in your colour. Only triangles with vertices at 3 of the points A, B,...F are included, lattice points are irrelevant.

Players must colour a line when it is their turn. A player who completes one of the forbidden triangles loses the game.

Draw mystic roses with different numbers of points to vary the game. For a more challenging game, play without a drawing relying on memory and visualization.
